

Meter Charge:

This charge represents the cost related to operating and maintaining source of supply, pumping, treatment and transmission and distribution facilities, as well as the capital costs related to upgrading these facilities. This charge is based on the amount of water you use. The charge is based on a four-tier increasing conservation water rate structure, meaning the cost per gallon increases with each rate block as shown below. By conserving water and keeping your water use within the lower blocks, you pay less per gallon. Reducing your water consumption will also ensure the long-term sustainability of our water source, the Long Island Aquifer.

Meter Size	Water Service Charge Residential Customer Effective 9/1/2024
5/8"	\$14.00
3/4"	\$16.75
1"	\$20.00
1 1/2"	\$39.00
2"	\$43.75
